## **POSITION STATEMENT**

### **HOMEOPATHY & VACCINATION (Measles)**

March 31, 2025 - In the current context, where the number of measles cases is increasing,<sup>1 2</sup> Boiron Canada reiterates its past positions regarding the vaccination campaigns led by public health authorities and wishes to highlight the following points:

- Boiron Laboratories recognize the importance of vaccination in public health in the fight against certain infectious diseases.
- There is no such thing as "homeopathic vaccination"; as no homeopathic medicine can generate the production of specific antibodies.
- Boiron Homeopathic medicines cannot be presented as an alternative to vaccination in either case.

For more information on prevention and risks of measles, contact your local health authority and visit:
